

Corona and medical waste: ECEXA expertise could score at international UNIDO webinar

Due to the eminent and for everyone noticeable Corona crisis, the competent and environmentally friendly treatment of medical waste in hospitals and clinics is of particular importance.

ECEXA, as the leading Austrian environmental cluster, was invited to an international webinar expert talk by the UNIDO Philippines due to its experience and expertise.

The international panel of experts was made up of high-ranking representatives from the Philippines, India, France, Singapore and Austria: doctors, authorities responsible for hazardous waste, hospital outfitters and manufacturers of waste treatment systems were invited to this conference.

The Austrian ECEXA expert Dr. Andreas Rentz reported on site about the current trends and latest developments in medical waste treatment with special consideration of the Covid-19 issue.

The tried and tested systems - autoclave - microwave - combustion with its advantages and disadvantages were put to the test and explained to the experts in detail.

The large and international participation of listeners showed above all a special interest in the lecture by our experienced ECEXA partner, who was able to competently answer many questions in the discussion following the lectures.

The ECEXA team under the direction of Günther Beck, including Senator Dr. Kiennast, Dr Rentz, Dr. hc Propst.
